The screenshot shows the MIT App Inventor web interface for a project named "DIYBookClub_Starter". The interface is divided into several sections:

- Left Panel:** Contains a "Build" button and a "QR code" for the app. Below the QR code, there is a note: "Make sure that each user of your app is able to write and submit a review and is able to read reviews submitted by other users of your app. Please note that when you first use your app, the CloudDB associated with your app will be empty. Also note that there might be a slight delay before the data entered into the CloudDB is readable on your app. After testing, if you need to make adjustments to your code, you will need to uninstall the old apk file from each tablet and do a new build, repeating the above procedure."
- Center Panel:** Displays the logic bricks for the app. The logic is as follows:
 - when Screen1.Initialize:** Set WriteReviewVerticalArrangement - Visible to false; set ReadReviewVerticalArrangement - Visible to false.
 - when WriteReviewButton.Click:** Set WriteReviewVerticalArrangement - Visible to true; set ReadReviewVerticalArrangement - Visible to false.
 - when SubmitReviewButton.Click:** Call CloudDB1.AppendValueToList with tag "Review" and item to add "BookTitleTextBox.Text" + " " + "BookReviewTextBox.Text".
 - when ReadReviewsListPicker.TouchDown:** Set WriteReviewVerticalArrangement - Visible to false; set ReadReviewVerticalArrangement - Visible to true.
 - when CloudDB1.TagList:** Set ReadReviewsListPicker.Elements to get value.
 - when ReadReviewsListPicker.AfterPicking:** Call CloudDB1.GetValue with tag "Review" and value if tag not there to create empty list.
 - when CloudDB1.GetValue:** Set ReadReviewsListPicker.Selection to value.
- Right Panel:** Shows the "Designer" view of the app. It includes a "Screens" section with "Screen1" and a "Media" section with "DIYBookClubIcon.png".

The bottom of the browser window shows the Windows taskbar with various application icons and the system clock displaying 03:28 p.m. on 20/08/2026.

The screenshot shows the MIT App Inventor web interface for the same "DIYBookClub_Starter" project, but from the "Designer" perspective. The interface is divided into several sections:

- Left Panel:** Contains a "Build" button and a "QR code" for the app. Below the QR code, there is a note: "Make sure that each user of your app is able to write and submit a review and is able to read reviews submitted by other users of your app. Please note that when you first use your app, the CloudDB associated with your app will be empty. Also note that there might be a slight delay before the data entered into the CloudDB is readable on your app. After testing, if you need to make adjustments to your code, you will need to uninstall the old apk file from each tablet and do a new build, repeating the above procedure."
- Center Panel:** Displays a visual representation of the app on a smartphone screen. The app's interface includes:
 - A title "¡Bienvenido a tu DIY Book Club!" with a bee icon.
 - Buttons for "Escribir reseña" and "Leer reseñas".
 - A "Reseña del Libro" section with a text input field and an "Agregar reseña" button.
 - A "Text for Label1" section with a text input field.
- Right Panel:** Shows the "Designer" view of the app. It includes a "Screens" section with "Screen1" and a "Media" section with "DIYBookClubIcon.png". The "Appearance" section for "ReadReviewsListPicker" is expanded, showing settings for "Background", "Font", "Text", and "TextAlignment".

The bottom of the browser window shows the Windows taskbar with various application icons and the system clock displaying 03:29 p.m. on 20/08/2026.
