

Lección 1

The screenshot shows the MIT App Inventor web interface. The project is titled "Lesson_1_Visualizing_Climate_Data_template_TCPROG2". The central workspace displays a smartphone preview of the app, which shows two line charts titled "Ice Duration". The top chart is for "Spiral Lake" and the bottom chart is for "Otsego Lake". Both charts show "Days of Ice Cover" on the x-axis (ranging from 1 to 4) and "Days of Ice Cover" on the y-axis (ranging from 0 to 6). The right-hand panel shows the "Spreadsheet" component, which is named "Spreadsheet1". It contains two data tables: "Spiral Lake" and "Otsego Lake". The "Spiral Lake" table has columns for "Year" and "Ice", with data points for 2017 (3 days) and 2018 (4 days). The "Otsego Lake" table has columns for "Year" and "Ice", with data points for 2017 (2 days) and 2018 (3 days). The bottom panel shows the "Componentes no visibles" (Hidden components) section, which includes "Spreadsheet1" and "Spreadsheet2".

Lección 2 y 3

The screenshot shows the MIT App Inventor web interface. The browser address bar displays `ai2a.appinventor.mit.edu/?locale=es_ES#11079615`. The project name is `Lessons_2_and_3_Modeling_and_Cleaning_Climate_Data_template`. The interface is in Spanish. The central canvas shows a mobile app prototype for "Climate Data: Cleaning the Data". The app has a title bar, a "Home" button, a "Show Data" button, a "Cleaned Data" button, and a "Show Line of Best Fit" button. The main content area displays a line graph with data points and a line of best fit. The right sidebar shows the "Components" list, including "spreadsheet" and "AnomalyDetection". The bottom status bar shows the time as 03:00 p.m. on 24/08/2026.

The screenshot shows the MIT App Inventor web interface with the code blocks visible. The browser address bar displays `ai2a.appinventor.mit.edu/?locale=es_ES#11079615`. The project name is `Lessons_2_and_3_Modeling_and_Cleaning_Climate_Data_template`. The interface is in Spanish. The code blocks are organized into several sections: "cuando" (when) blocks for button clicks, "cuando" blocks for data cleaning, "cuando" blocks for data visualization, and "cuando" blocks for data analysis. The code blocks use the "spreadsheet" component to manage data and the "AnomalyDetection" component to detect anomalies. The bottom status bar shows the time as 03:00 p.m. on 24/08/2026.

Lección 4

The screenshot shows the MIT App Inventor web interface. The browser address bar displays `ai2a.appinventor.mit.edu/?locale=es_ES#11137893`. The project is titled "Lesson_4_Predictions_template". The central canvas shows a mobile app preview with a line graph titled "Climate Data: Making Predictions". The graph displays two data series: "Ice cover on the lake" and "Number of days a freshwater lake was frozen". The x-axis represents "Year" (1 to 4), and the y-axis represents "Days" (0 to 8). The app interface includes buttons for "Home", "Show Data", "Detect Anomalies", "Draw LOF", and "AI Analysis". The right sidebar shows the "Properties" panel for the "makePredictionsScreen" screen, with various data-related properties like "Slope", "Y-intercept", and "X-intercept".

The screenshot shows the MIT App Inventor web interface. The browser address bar displays `ai2a.appinventor.mit.edu/?locale=es_ES#11137893`. The project is titled "Lesson_4_Predictions_template". The central canvas shows the "makePredictionsScreen" screen with a complex logic block structure. The left sidebar shows the "Integrados" (Integrated) section with categories like "Control", "Lógica", "Matemáticas", and "Textos". The right sidebar shows the "Properties" panel for the "makePredictionsScreen" screen, with various data-related properties like "Slope", "Y-intercept", and "X-intercept".
